

System Settings

Overview

The System Settings module allows authorized administrators to configure, manage, and control the behavior, security, appearance, and integrations of the system. These settings ensure the system operates according to organizational policies, security standards, and user needs.

Access to system settings is restricted based on user roles and permissions.

1. User & Access Management

1.1 User Management

- Create, update, activate, and deactivate user accounts
- Manage user profile information
- Assign users to organizations and branches

1.2 Access Rights Management

- Define roles (e.g., Admin, Manager, User)
- Assign permissions to roles (view, create, edit, delete)
- Assign one or more roles to users
- Ensure users can only access authorized features and data

1.3 Password & Session Settings

- Change password functionality for users
- Password reset via email

- Configurable password validation rules (length, complexity, expiry)
- Session timeout based on inactivity
- Logout option available from all secure pages

1.4 Authentication Integration

- LDAP integration for centralized authentication and user management
-

2. Organization Management

2.1 Organization Settings

- Create and manage organizations
- Ensure organization creation functionality is fully operational

2.2 Organization Structure

- Define hierarchical structures (organization, branch, department, unit)
- Organization structure can only be created and modified by Super Administrators

2.3 Branch Management

- Create and manage branches within organizations
- Configure branch-related attributes and visibility

3. Communication & Notification Settings

3.1 SMTP Configuration

- Configure outgoing email server settings
- Support authentication, ports, and encryption
- Enable or disable email notifications

3.2 Reminder & Notification Services

- Send automated reminders through:
 - Email
 - Telegram bot
 - On Dashboard Notification
 - Configure reminder schedules and triggers
-

4. Appearance & Branding

4.1 Theme Management

- Light mode
- Dark mode
- System-default theme

4.2 Branding Settings

- Editable system page title
 - Upload and manage system logo
 - Branding changes apply system-wide without downtime
-

5. Dashboard Settings

5.1 Dashboard Clock

- Display real-time clock on the dashboard

- Time reflects system-configured time zone

5.2 Map Integration

- Display map on the dashboard
 - Used for visualizing organization or branch locations
-

6. Task & Workflow Settings

6.1 Task Creation

- Standardized task creation form
 - Validation and usability aligned with system standards
 - Non-standard task creation behavior corrected
-

7. Security, Audit & Compliance

- Role-based access enforcement across all modules
 - Audit logs for:
 - User access changes
 - Role and permission updates
 - Authentication events
 - Logs available only to authorized administrators
-

System Settings Menu Structure (Final)
